

ELDAN Various Scrap Recycling Systems

WORLD-CLASS RECOVERY!

Where some see waste or scrap, others see opportunities. The recycling equipment from Eldan has converted millions of tonnes of industrial and consumer waste and scrap into valuable resources, thus helping both business and environment. We have the know-how, the experience and the capability to help with your specific problem – from small to large scale projects, from designing the recycling system to commissioning, we are there for you.

All recycling systems developed at Eldan are designed to meet market requirements and with the customer in focus. Eldan technology is proven technology. During the years our systems have been developed together with customers located on all continents. From small casino coins and cartridge cases to large wind turbine blades, plaster boards, V-belts and compressors from refrigerators, to name a few – Eldan has helped develop the solution to meet the challenge!

Depending on the specific customer requirements the Eldan Recycling systems can be tailored to fit the demand. The modular system design enables the possibility of upscaling production in the future.

Various Scrap Recycling Systems

Rubber thermal lists
